# Pairwise comparison report

## Abstract

This report gives a comparison between MSFT and C.

## 1 Share components

This section contains components which are shared between MSFT and C. There are 5 common components in total. They are will be fully described in Table 1.

Table 1: Share components

| **Description** | MSFT | C |
|---|---|---|
| Plot of posterior mean and variance |  |  |
| •This component is a smooth function with a typical lengthscale of 2.4 days.The marginal standard deviation of the function increases linearly |  |  |
| •This component is periodic with a period of 1.0 years.The shape of this function within each period has a typical lengthscale of 2.2 weeks |  |  |
| •This component is periodic with a period of 0.8 years but with varying amplitude.The amplitude of the function increases linearly.The shape of this function within each period has a typical lengthscale of 4.4 months |  |  |

*Continued on next page*

Table 1 – *Continued from previous page*

| **Description** | MSFT | C |
|---|---|---|
| •This component models uncorrelated noise.The standard deviation of the noise increases linearly |  |  |
| •This component is periodic with a period of 7.6 months.The shape of this function within each period has a typical lengthscale of 7.4 days |  |  |

## 2 Individual components

This section contains components which are differed between MSFT and C. There are 0 components in total. They are will be fully described in Table 2.

Table 2: Individual components

| **Description** | MSFT | C |
|---|---|---|
| Plot of posterior mean and variance |  |  |
