## Pairwise comparison report

## **Abstract**

This report gives a comparison between MSFT and AIG.

## 1 Share components

This section contains components which are shared between MSFT and AIG. There are 4 common components in total. They are will be fully described in Table 1.

Description **MSFT** AIG Plot of posterior mean and variance •This component is a smooth function with a typical lengthscale of 2.4 days. The marginal standard deviation of the function increases linearly •This component models uncorrelated noise. The standard deviation of the 0.01 0.01 noise increases linearly 0.9 +2.001e3 •This component is periodic with a period of 7.6 months. The shape of this function within each period has a typical lengthscale of 7.4 days 0.9 +2.001e3 Continued on next page

Table 1: Share components

Table 1 – Continued from previous page

| Description  | MSFT   | AIG  |
|--|--|--|
| •This component is periodic with a period of 1.0 years. The shape of this function within each period has a typical lengthscale of 2.2 weeks | 1.0<br>0.5<br>0.0<br>-0.5<br>-1.0<br>0.5 0.6 0.7 0.8 0.9<br>+2.001e3 | 1.0<br>0.5<br>0.0<br>-0.5<br>-1.0<br>0.5 0.6 0.7 0.8 0.9<br>+2.001e3 |

## 2 Individual components

This section contains components which are differed between MSFT and AIG. There are 1 components in total. They are will be fully described in Table 2.

Table 2: Individual components

| Description  | MSFT   | AIG  |
|--|--|--|
| Plot of posterior mean and variance  | 2<br>1<br>0<br>-1<br>-2<br>-3<br>0.5 0.6 0.7 0.8 0.9<br>+2.001e3                           | 2<br>1<br>0<br>-1<br>-2<br>-3<br>-4<br>0.5 0.6 0.7 0.8 0.9<br>+2.001e3 |
| •This component is periodic with a period of 0.8 years but with varying amplitude. The amplitude of the function increases linearly. The shape of this function within each period has a typical lengthscale of 4.4 months | 0.75<br>0.50<br>0.25<br>0.00<br>-0.25<br>-0.50<br>-0.75<br>0.5 0.6 0.7 0.8 0.8<br>+2.001e3 |  |
