Pairwise comparison report

Abstract

This report gives a comparison between WMT and BP.

1 Share components

This section contains components which are shared between WMT and BP. There are 4 common components in total. They are will be fully described in Table 1.

Description WMT BP Plot of posterior mean and variance •This component is a smooth function with a typical lengthscale of 2.4 days. The marginal standard deviation of the function increases linearly •This component is periodic with a period of 0.8 years but 0.75 with varying amplitude. The 0.50 0.25 amplitude of the function 0.00 increases linearly. The shape -0.25 -0.2 of this function within each period has a typical lengthscale of 4.4 months •This component models uncorrelated noise. The standard deviation of the noise increases linearly Continued on next page

Table 1: Share components

Table 1 – Continued from previous page

Description	WMT	BP
•This component is periodic with a period of 7.6 months. The shape of this function within each period has a typical lengthscale of 7.4 days	2 1 0 -1 -2 -3 0.5 0.6 0.7 0.8 0.9 +2.001e3	1.5 1.0 0.5 0.0 -0.5 -1.0 -1.5 -2.0 0.5 0.6 0.7 0.8 0.9 +2.001e3

2 Individual components

This section contains components which are differed between WMT and BP. There are 2 components in total. They are will be fully described in Table 2.

Table 2: Individual components

Description	WMT	BP
Plot of posterior mean and variance	2 1 0 -1 -2 -3 0.5 0.6 0.7 0.8 0.9 +2.001e3	2 1 0 -1 -2 0.5 0.6 0.7 0.8 0.9 +2.001e3
•This component is periodic with a period of 0.8 years but with varying amplitude. The amplitude of the function increases linearly. The shape of this function within each period has a typical lengthscale of 3.2 months •This component is a quadratic polynomial	0.6 0.4 0.2 0.0 -0.2 -0.4 -0.6 0.5 0.6 0.7 0.8 0.9 +2.001e3	2 1 0 -1 -2 0.5 0.6 0.7 0.8 0.9 +2.001e3
